

# Basic Math Operators

# Basic Math Operators

- The “+” operator is used for addition
- For example:

```
int sum1 = 10 + 20; //sum1 is 30
```

- The “-” operator is used for subtraction
- For example:

```
int diff1 = 200 - 10; //diff1 is 190
```

- The “\*” operator is used for multiplication
- For example:

```
int prod1 = 10 * 20; //prod1 is 200
```

# Basic Math Operators

- The “/” operator is used for division
- For example:

```
int division1 = 100 / 10; //division1 is 10
```

- The “%” is the modulus operator. It returns the remainder, after division.
- For example:

```
int result1 = 4 % 2; //result1 is 0  
int result2 = 1000 % 90; //result2 is 10
```
